

ABSTRACT

To provide an acrylic elastomer composition, which comprises a carboxyl group-containing acrylic elastomer, and a thiazole-based compound, can give vulcanization-molded article with improved compression set resistance characteristics, even if the vulcanization-molded articles of carboxyl group-containing acrylic elastomer are thin-wall articles, where the carboxyl group-containing acrylic elastomer is preferably an aliphatic unsaturated dicarboxylic acid monoalkyl ester-copolymerized acrylic elastomer, and the composition is generally vulcanization-molded by a vulcanizing agent of polyvalent amine compound.
